Flexible and mobile: Vogelsang launches newly designed wine pump

- **Versatile use with high efficiency**
- **Mobile solution: easy handling thanks to improved chassis**
- **Optimized design without gaps: simplifies cleaning, reduces maintenance**

Essen (Oldenburg), November 26, 2024 – For the first time, [Vogelsang GmbH & Co. KG](#) is launching a wine pump that features a VY pump. It stands out with its modified, modern design, pulsation-free operation and the gentle conveying of the grapes and wine without any foam. “Our customers in the wine industry expect a solution that is not only efficient, but also flexible and user-friendly. With the new wine pump with an integrated VY pump, we offer them exactly that,” says Harald Vogelsang, Managing Director of Vogelsang GmbH & Co. KG. The company presented the new pump for the first time at the SIMEI in Italy.

The wine pump is particularly versatile and capable of conveying liquids of different viscosities. This makes it suitable for handling all the important wine production processes – including decanting the wine from tanks, conveying the pomace after fermentation and maceration, and bottling.

Increased flexibility with simple operation

The wine pump is available in two sizes and five variants. It can be configured differently, depending on size and flow rate requirements. The solution is also designed for use in confined spaces that are difficult to access. “The new chassis has now a brand new functional design, which makes it much easier to transport the pump,” says Claudio Ragusa, Sales Engineer at Vogelsang Italy. “This is our response to our customers’ desire for greater flexibility and ease of use.” The new design allows users to easily move the pump between different production areas.

The pump’s improved, gap-free design prevents material deposits – which makes cleaning easier and reduces maintenance work. The control technology simplifies daily handling and makes it possible to exchange data on pressures, flow rates, and work cycles. The pump is also equipped with a user-friendly touchscreen and can be controlled via an easy-to-use app that offers functions tailored to the wine industry.

VY Series: high-performance pump for wine production

The performance of the VY pumps for the wine industry ranges from 10-700 hl/h at a maximum pressure of 10 bar, depending on the application. The pumps consist of a flow-optimized, one-piece housing and therefore offer a high level of efficiency. The soft, elastomer-coated rotary pistons ensure a particularly gentle pumping process. The delivery direction of the pumps can be reversed, allowing containers to be filled or emptied as required. The solution is also characterized by its high suction power, reduced noise emissions, and ease of service and maintenance – the latter is also ensured by the integrated QuickService concept.

About Vogelsang:

Vogelsang GmbH & Co. KG, headquartered in Essen (Oldenburg) in Lower Saxony, develops, produces and sells technically high-quality, individually configurable, service-friendly machines. Founded in 1929, the company grew from manufacturing agricultural machinery to specializing in machines and solutions in the wastewater, agricultural technology, biogas, industrial and transportation technology segments. The innovative family-owned company currently employs over 1,300 people worldwide. As an internationally oriented mechanical engineering group, the company ensures the highest product quality through research, development and production at its Essen location and other production facilities, both in Germany and abroad. With 30 subsidiaries and other representatives, Vogelsang is present in over 50 countries around the world. The company has already received several accolades from the economic research institute Prognos AG, including the award “Germany’s innovation leader.” Further information can be found online at: vogelsang.info
